

PROFESSIONAL PEST MANAGEMENT

# SMALL APPLICATION, **BIG IMPACT**

Enter the void and tackle the toughest pest infestations with Advion® MicroFlow insect bait. Featuring the same targeted MetaActive™ effect and active ingredient, *indoxacarb*, found in other trusted Advion brand products, this dry flowable bait can be applied deep within hard-to-reach voids and harborage areas for outstanding control of ants, cockroaches, crickets, pantry pests and more.

## A LITTLE GOES A LONG WAY

Advion MicroFlow can be applied anywhere dust products are normally used in residential multi-family homes and commercial spaces, including sensitive food-handling establishments. The bait can reach deep within harborages that may not be visible, such as:

- ▶ Motor housings
- ▶ False bottoms of cabinetry
- ▶ Hollow spaces within equipment
- ▶ Wall voids adjacent to plumbing penetrations

With labeled rates defined as an amount per unit area instead of a specified number of bait placements, Advion MicroFlow offers the freedom to apply the bait as needed, including baiting on a large scale.

## Complete control for challenging accounts

- ▶ Highly attractive bait matrix consists of a balance of lipids, proteins and sugars that provide better bait consumption and improved pest mortality at low use rates
- ▶ The MetaActive effect activates *indoxacarb* once ingested by target pests, leaving non-target organisms largely unaffected
- ▶ Powerful secondary transfer effect occurs when pests carry larger particles back to their harborage that nestmates consume during grooming
- ▶ Finely milled particles adhere to pests' exoskeletons and penetrate deep within cracks, crevices and voids to reach areas inaccessible to gel baits or liquids
- ▶ Complements gel bait applications on cleanout and maintenance accounts
- ▶ 8-oz. jar can thread directly onto an Exactive power duster, and included scoops are sized to the opening of popular bulb and bellows dusters

## Guaranteed cockroach control you can trust

Advion MicroFlow can be used to complement the SecureChoice<sup>SM</sup> Cockroach Assurance Program, which combines an integrated pest management approach with proven products for thorough control. Following the program's protocols will produce at least a 90% reduction in cockroach populations within the first four customer visits during a 60-day period. If adequate reduction is not achieved, Syngenta will provide the appropriate quantity of products to cover the retreatment.
