

# NOWHERE TO HIDE

## PROFESSIONAL PEST MANAGEMENT

### STOP COCKROACHES AT EVERY STAGE

Cockroaches have no room to escape from Advion® Trio cockroach gel bait. It features the active ingredient *indoxacarb* alongside two insect growth regulators (IGRs), *pyriproxyfen* and *novaluron*. The IGR combination interrupts the cockroach life cycle by preventing egg production, nymph maturation and chitin production, all of which contribute to complete cockroach population control.

### LARGE INFESTATION CONTROL

- ▶ A highly attractive bait matrix helps ensure consumption, as well as promotes active ingredient transfer to the harborage via secondary and tertiary kill, for complete control
- ▶ Two IGRs knock down nymphs to prevent population rebounds
- ▶ Features the MetaActive™ effect found in all Advion brand products, which activates *indoxacarb* through interaction with the target insects' digestive enzymes, leaving non-target organisms largely unaffected
- ▶ Ideal for tough cleanout jobs in residential and commercial spaces, including multi-family housing and food-handling establishments, as directed by the product label

## DUAL IGR EFFICACY AGAINST GERMAN COCKROACHES

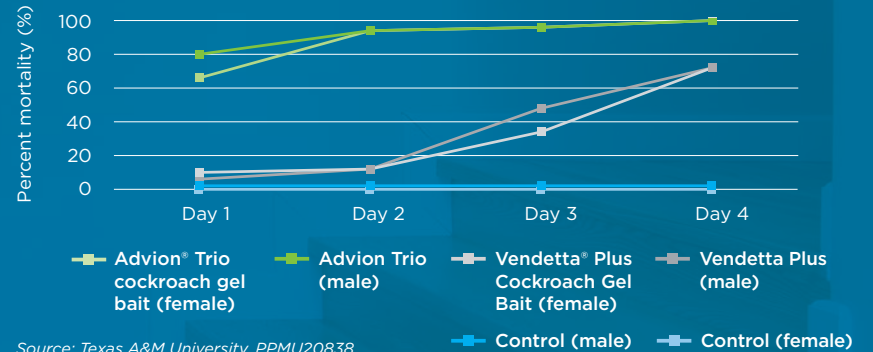

This graph represents the percentage of German cockroach eggs that did not hatch because the gravid female aborted the egg cases. Source: NC State University, PPMU21838.

## GERMAN COCKROACH NYMPH MORTALITY

This data reveals that while pyriproxyfen (a juvenile hormone mimic) in nymphs generally does not cause fast mortality, it does prevent nymphs from reaching maturity and reproducing, which significantly affects population growth. Similarly, the effect of novaluron on chitin synthesis prevents the formation of new exoskeletons, which affects molting and growth in nymphs and, ultimately, results in mortality. ## NO ESCAPE — GUARANTEED

Advion Trio can be used as a part of the **SecureChoice<sup>SM</sup> Cockroach Assurance Program**, which guarantees at least a 90% reduction in cockroach populations within the first four customer visits during a 60-day period. This level of control — or higher — is often achieved within a shorter timeframe. The program ensures comprehensive control by combining an integrated pest management approach with proven products. If adequate reduction is not achieved, Syngenta will provide the appropriate quantity of products to cover the retreatment.
